### **DETAILED ACTION**

This application clearly fails to comply with the requirements of 37 C.F.R. 1.821-1.825. Applicant's attention is directed to these regulations, published at 1114 OG 29, May 15, 1990 and at 55 FR 18230, May 1, 1990.

See the enclosed notice to comply with requirements. Applicant is given the time period set within this office action to comply with the sequence requirements.

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to an immunogenic composition comprising a pharmaceutically acceptable excipient and an attenuated bacteria, classified in class 424, subclass 258.1.
- II. Claims 10-27, drawn to an immunogenic composition, classified in class 424, subclass 234.1.
- III. Claims 28-31, drawn to a bacteria, classified in class 530, subclass 825.
- IV. Claims 32-36, drawn to a method of eliciting an immune response in an individual, classified in class 424, subclass 9.2.

Inventions I and II are related as products. In the instant case inventions I and II are different from each other because invention I has a pharmaceutically acceptable

Art Unit: 1645

excipient and an attenuated bacteria. However, invention II comprises an inhibitor of a human defensin, a pharmaceutically acceptable excipient and attenuated bacteria. The inventions of invention I and II are different because invention I does not require an inhibitor of a human defensin which is required by invention II.

Inventions I and III are related as products. In the instant case inventions I and III are different from each other because invention I has a pharmaceutically acceptable excipient and an attenuated bacteria, while Invention III has a bacteria with no carrier.

Inventions I and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case invention I (bacteria) can be used in a diagnostic assay.

Inventions II and III are related as products. In the instant case invention II products comprise an inhibitor of a human defensin, a pharmaceutically acceptable excipient and attenuated bacteria. However, invention III comprises genetically modified bacteria.

Inventions II and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case invention II and

Art Unit: 1645

Iv are different because invention II has a pharmaceutically acceptable excipient and an attenuated bacteria as well as an inhibitor. Invention IV is a method of eliciting an immune response in an individual.

Inventions III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product can be uses in a method of diagnosis.

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims that depend from or otherwise include all the limitations of the allowable product claim will be rejoined in accordance with the provisions of MPEP § 821.04. **Process claims that depend from or otherwise include all the limitations of the patentable product** will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the

Art Unit: 1645

requirements of 35 U.S.C. 101, 102, 103, and 112. Until an elected product claim is found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowed product claim will not be rejoined. See "Guidance on Treatment of Product and Process Claims in light of In re Ochiai, In re Brouwer and 35 U.S.C. § 103(b)," 1184 O.G. 86 (March 26, 1996). Additionally, in order to retain the right to rejoinder in accordance with the above policy, Applicant is advised that the process claims should be amended during prosecution either to maintain dependency on the product claims or to otherwise include the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
